

# J K Machine Tools: Make Briquettes Using Our Briquetting Machines

# Briquetting

Briquettes are made from natural raw materials like wood waste, forestry waste, agro remains, sugarcane stalk, etc. The briquettes are prepared by special process of briquetting. To make the briquettes all the raw materials are mixed in a machine where they are crushed, compressed and dried to form proper shaped briquette.

# Briquetting Plant

The briquetting plant is designed in order to prepare briquettes. The shape and size of briquetting plants are made according to the size of briquette required. We prepare them from best

quality of materials to increase their life span and efficiency. These [briquetting plant](#) are offered at the best price range and features.

# Briquetting Machine

The briquetting machine is made as per the industrial standards to suit the needs of the industry. We offer a wide range of briquetting machine to solve the problem of bio-waste disposal in various industries.

The specifications of the machine are kept as per the requirements of the client. They are made under the supervision of the highly skilled experts.

# Briquetting Press

In order to prepare proper shaped briquettes, the biomass needs to be compressed accurately. This process of compressing the raw materials is to be done in special briquetting press.

The press has special mechanism that applies lot of pressure on the matter to give them proper shape. We offer a wide range of briquetting press machines to prepare smooth shaped briquettes.

# Jumbo 90

Briquettes vary in shape and size. Their specifications are kept in sync with the requirements of the location and industry where they are to be used. We offer Jumbo 90 briquetting machine that are

used to prepare briquettes of 90mm diameter and cylindrical shape. This machine helps in making briquettes at a very high rate without affecting the quality of the prepared briquette.
